

WHY HAM-LET VALVES & FITTINGS?

A superior product with an unmatched quality.

Ham-Let's high-quality products stand out from the rest and also provide reliability and performance for discerning customers.

Key differentiators:

- ✓ Demonstrating complete interchangeability/intermixability with the other leading brand bodies, nuts and ferrules. We undergo annual testing and certification by TUV.
- ✓ Presenting a comprehensive product range, we encompass various offerings, such as fittings, valves, hoses, ASTAVA manifolds and ultra-high purity products.
- ✓ Providing a variety of materials, we include options like 316 stainless steel, brass and exotic alloys, such as Hastelloy and Monel.
- ✓ Utilizing stainless steel with an enhanced chromium and nickel blend, we ensure heightened corrosion resistance and protection against hydrogen embrittlement. This exclusive feature includes standard passivation for all stainless products.
- ✓ Employing a technique where male threads are rolled instead of cut, we ensure increased strength, prevents galling and facilitates a smoother installation process.

Choose Excellence — Opt for Brennan and Ham-Let to Elevate Your Standards.
